The Story of GK & A Logistics Terminal Facility

For: Nigerian Export-Import Bank (NEXIM)

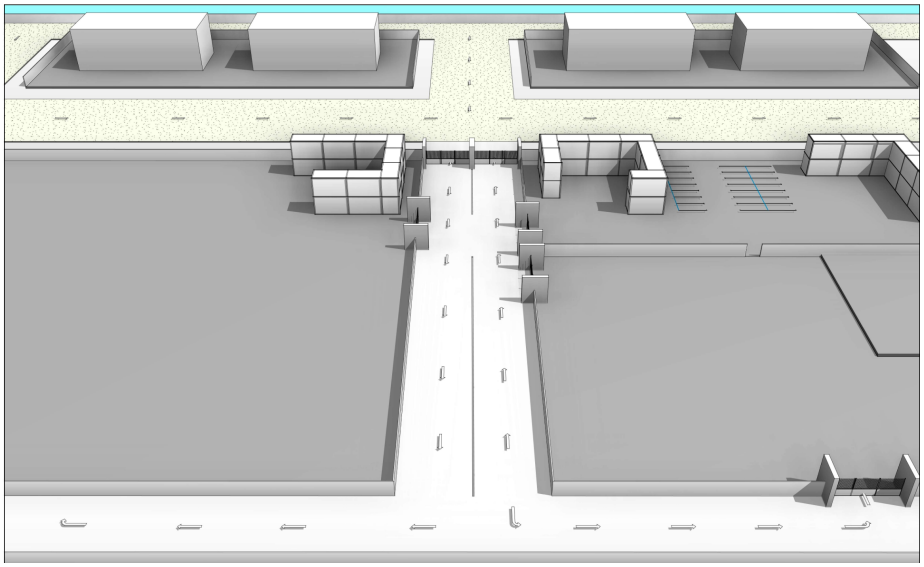
Date: October 3, 2025

Introduction

Welcome to the story of GK & A Logistics Services Ltd's state-of-the-art terminal facility at the NPA Lighter Terminal, Ikorodu. This strategic location serves as a crucial gateway for Nigeria's import and export activities, connecting businesses to global markets through efficient maritime logistics.

The Layout: A Comprehensive View

Let's begin our journey by examining the overall layout of our terminal facility:



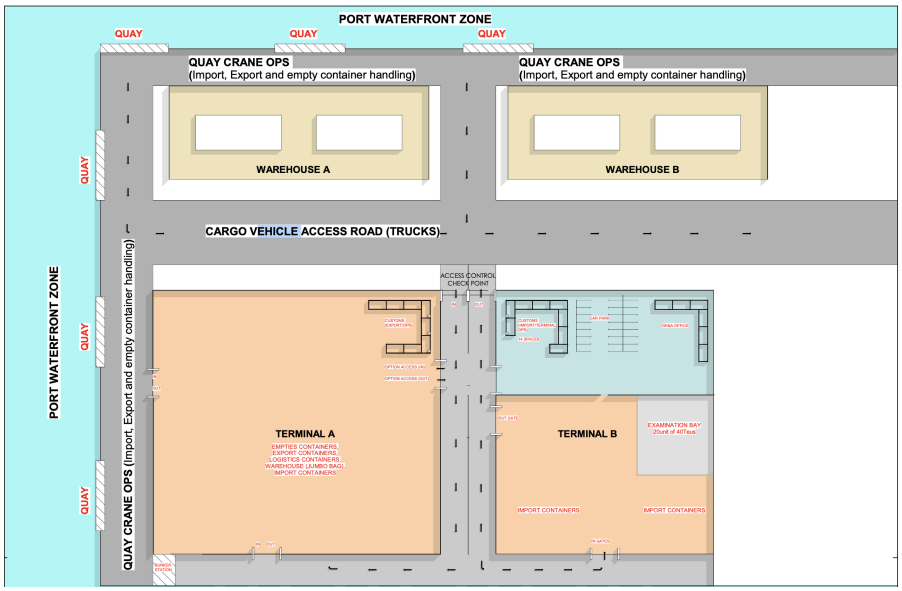


Figure 1: Complete layout of the GK & A Logistics Terminal Facility

This comprehensive layout shows how we've strategically organized our facility to maximize efficiency and operational flow. The design carefully balances the needs of cargo handling, storage, and transportation while maintaining security and compliance with international standards.

Key Facility Components

1. The Quay/Wharf: Our Maritime Gateway

At the heart of our operations is our substantial quay facility:

- **Quay Apron Area**: 37,305.84 m^2
- **Quay Length**: 1,232.2 m
- **Quay Width**: 28.38 m

This expansive waterfront infrastructure provides ample space for multiple vessel berthing and efficient cargo handling operations. The substantial length allows for simultaneous operations with several vessels, while the width accommodates various cargo types and handling equipment.

2. Warehouse Facilities: Secure Storage Solutions

Our facility includes dedicated warehouse space for cargo storage:

- **Warehouse Space**: 6,040.83 m^2
- **Paved Stacking Area**: 8,871.10 m^2

These areas provide secure, weather-protected storage for goods awaiting distribution or collection, as well as open-air stacking areas for larger cargo items.

Infrastructure Development Story

Phase 1: Site Preparation and Foundation

Our development journey began with careful site preparation, ensuring the ground could support the heavy loads associated with maritime cargo operations. This involved:

- Geotechnical surveys to assess soil conditions
- Site clearing and grading
- Installation of proper drainage systems

Phase 2: Quay Construction

The construction of our quay facility was a significant undertaking:

- Deep foundation work to support heavy loads
- Installation of reinforced concrete structures
- Implementation of marine-grade materials to withstand saltwater exposure

Phase 3: Warehouse and Storage Development

With our maritime gateway established, we developed our storage facilities:

- Construction of climate-controlled warehouse spaces
- Development of paved stacking areas for outdoor storage
- Installation of security systems and lighting

Phase 4: Security Infrastructure

Recognizing the importance of security in logistics operations, we implemented a comprehensive perimeter security system:

- **Perimeter Fence**: 784.85 m of 2.44 m high galvanized mesh fencing
- **Security Gates**:
  - Vehicular gates (G1a, G1b, G2, G3-G6) for container and vehicle access
  - Pedestrian gates (P1, P2, P3) for personnel access control
- **Barbed Wire Topping**: Three-strand barbed wire for additional security

Operational Capabilities

Cargo Handling Capacity

With our extensive quay length of 1,232.2 meters, we can accommodate multiple vessels simultaneously, significantly increasing our throughput capacity compared to smaller facilities.

Storage Flexibility

Our combination of warehouse space (6,040.83 m^2) and paved stacking area (8,871.10 m^2) allows us to handle diverse cargo types:

- Containerized goods in our warehouse facilities
- Bulk cargo in our open stacking areas
- Oversized equipment requiring specialized handling

Security and Compliance

Our facility meets international standards for security and operations:

- Full compliance with Nigerian Building Code
- Adherence to BS EN standards for structural design
- Implementation of ISO specifications for materials and coatings
- Comprehensive security infrastructure with controlled access points

---

Strategic Advantages

Location Benefits

Our position at the NPA Lighter Terminal, Ikorodu provides:

- Direct access to maritime shipping routes
- Connectivity to Lagos' extensive road network
- Proximity to major industrial and commercial centers

Infrastructure Quality

Our facility features:

- Modern construction techniques and materials
- Robust infrastructure designed for heavy-duty use
- Comprehensive security systems
- Efficient layout for streamlined operations

Scalability

The design of our facility allows for future expansion:

- Available land for additional warehouse construction
- Quay infrastructure with reserve capacity
- Utility systems designed with growth in mind

Conclusion

The GK & A Logistics Terminal Facility represents a significant investment in Nigeria's maritime logistics infrastructure. Our strategic location, comprehensive facilities, and commitment to quality and security position us as an ideal partner for NEXIM's initiatives to promote Nigerian trade and economic development.

We look forward to discussing how our facility can support your financing programs for export-import activities and contribute to Nigeria's economic growth.
